TITLE : CONNECTOR FOR CHARGING

ABSTRACT : PROBLEM TO BE SOLVED: To prevent short circuit caused by scattering of water on a connector member for battery charging.

SOLUTION: In a connector for charging 100 constituted with a battery side connector member 110 formed on a bicycle containing a battery for an electrically driven bicycle on which the battery is mounted, which is driven or helped to drive by rotating a motor with electric power supplied from the battery, and a power source side connector member 130 connected to the outside power source, the battery side connector member 110 has a pair of charging electrodes 122 electrically connected to the battery, a charging ON-OFF circuit arranged between the electrodes 122 and the battery, and a reed switch 126 for controlling the circuit. The power source side connector member 130 has a pair of electrodes 136 capable of coming into contact with a pair of electrodes 122 on the battery side and a magnet 138 for operating the reed switch 126.
